Feb 20/1938 (Sunday)

Dr. Corbett H. Bailey Chief Exec. Secy. of Conducting Committee of T.V.A. and Agricultural College, Oxford, asked me to have dinner with him at Council Club. He came with his wife and daughter after Church at 1.15 pm. After dinner he left Mrs B. and daughter at a meeting and we went to Nat Geographical Park until 3.45 pm. Saw Chinese teachers, Japanese Mammal House, the Captain Peary Eskimos brought back in 1897 by Dr. Kane, Smithsonian Art Gallery, Museum of Natural History, Bureau of Ethnology, Museum of American History, Freer Gallery of Art. Saw good exhibit of sweet potatoes (C. Rich. C. Franklin, C. (3 kinds). Pennsylvania Sweet Potatoes, Porto Rico, Nancy Hall, Yellow Yam, Nansemond, Florida Yellow Yam, Red Yam, Georgia Red, Dahomey, Pyguay, Pink, Jersey, Red Jersey, Big Stem Jersey, Improved Big Stem Jersey, Improved Red Jersey, Improved Yellow Jersey, Improved Nancy Hall, Improved Porto Rico, Improved Pyguay, Pink, Improved Dahomey, Improved Red Yam, Improved Yellow Yam, Improved Florida Yellow Yam, Improved Nansemond, Improved Georgia Red, Improved Yellow Jersey, Improved Big Stem Jersey, Improved Red Jersey, Improved Pink, Improved Pyguay

and has a wonderful library

Generals. His services
during the Great Centennial
campaign against Sioux Indians
in 1876, and before and subsequently
including copies of unpublished
letters Manuscripts & Journals in
Civil & Indian Wars.

Feb 4. 1930 (Saturday)

Passed by office of Dr. Paul Barlow, Curator of Mollusca and had a chat with him.

He was Lunching (Coffee) the Museum of Natural History, University of Iowa. He said that he tried to get the late Professor C.C. Nutting, who founded and built up the Museum, to deposit his hydroid types in Washington, D.C. (Smithsonian Institution). Said he warned Nutting that he had no successor trained to carry on, and the collections would be in danger. When Nutting died, a new man was appointed (Worley?) who was not interested in taxonomy and systematic Zoology. The Museum was soon separated from the Dept of Zoology & Entomology & it took money from the Dept of Zoology which they wanted for Genetics, Ed.

The Dept of Zoology was "cleaned up" or "cleaned up" and the

new man, Emptied out a lot
2 Prof Melling's collection of
microscope slides (7 types) and
threw them into the garbage
dump — a loss to Science.
This shows what can happen when
a museum does not have a continuing
policy.

Dalloch said that Prof. Brockhouse
next collection (Echinoplicia)
was privately owned by Brockhouse
and was bought for about $ 200 —
for the U.S. National Museum

Dalloch volunteered the statement
that he had heard that the National
Museum of Canada, and that he
wondered why Canada did not
have a Biological Survey. He
said that a Biological Survey
might be a great help to the Museum

Feb. 19, 1938

Passed by office of Dr. August Bresch, Director of Entomology, and dropped in. He knows C. H. Young as a Lepidopterist, and does he had determinations of Young's specimens only yesterday

He mentioned Mr. Johansen and said that F.J. was in the division when he first came to U.S. in 1912, but was too busy to succeed here in Washington.

Called for a few minutes at Division of Birds and saw Dr. Herbert Friedmann and Mr. J. H. Riley

Feb 14th. 1938

Had a talk with Dr. Remington Kellogg assistant Curator, Division of Mammals, U.S. N.M. Museum.

Dr. Kellogg was in Europe last year at International Conference on whaling questions. He said that the Germans were among the first to sign the treaty, and that they wanted whale products and killing restricted because the Germans need whale oil (now absorbing steel and-lady the production), and do not want to invest money in an industry which might be destroyed in two years by killing off too many whales.

Feb. 19, 1938. Mr. Gerrit S. Miller, Jr. introduced me to Dr Ernest Schwartz Division of Mammals, U.S. National Museum, Washington, D.C.

Dr Schwartz is a German mammalogist who has only been in U.S. for a few months. Was studying House Mouse in N.Y.

He showed me some specimens Mus musculus musculus - a darker above, lighter below, feet rather dusky, ears fairly large.

A smaller form M. m. ——— race from Southern Europe) is more yellowish above, yellowish below (usually), feet whitish, and ears almost always light colored. Most of the specimens (U.S. U.S.) which he showed me were from California.

A form found around Mediterranean Sea, &c

pm.

Looked up Mr. Gerrit S. Miller's standard for color and he says he did not think to make any mention of color up

Feb. 8th (Friday Evening)
Dinner at Dr. Alexander
Wetmore's. Met Mrs. Wetmore
and Miss Margaret Wetmore (Pipsi)
& Georgetown Generally

Wetmore returned from Venezuela
in December. Had an opportunity
to make a biological Survey, on
Collot Islands in large part.
formerly property of the late
Andrew Carnegie.

Re U.S.N.M. he says that he
is able to buy some specimens from
Smithsonian fund, also from two
other funds (Endowments) of his
Own salaries here and for clerk.
hire. Many people came to Wash
in Washington on various Govt.
projects and found living costs
too high in Washington and
the salaries, too low. Some
persons (not the President) wanted
to suspend research activities
entirely for a year.

Re New Deal, he thinks he was
very able to get Cuneo Chamber help
through WPA — now has about
75 working in USNM — cataloguing,
identifying, osteology etc.
At time was on various projects
archaeological investigations etc,
where he was a liaison person working
to get work thru Bill Canning
men to supervise keeping up 680
& 702 plus workers — had much
help enough to engage some of the
men
